

Program Description: The Application allows you to search for Movies and TV shows by genre that are currently available on your favorite streaming platforms such as: Hulu, Netflix, Amazon Prime, HBO and so much more. Our app retrieves the title of the show/movie, type: movie or tv show, and the show/movie's release year from the api. The api data is sourced from various media providers, including streaming services, and is updated regularly.

App Features:

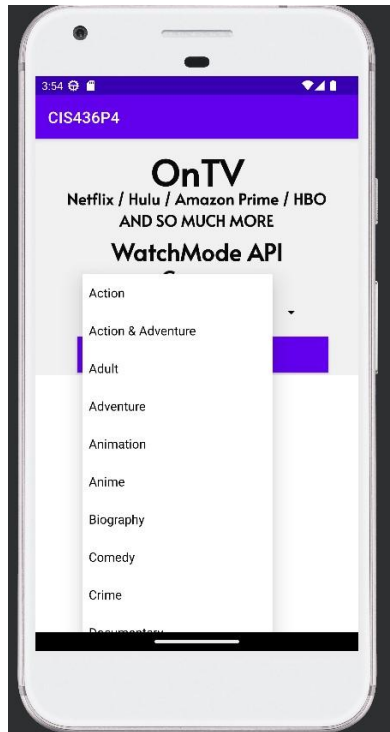

- ☒ Three types of Widgets: Recycler view, spinner, search button, image view, text views.
- ☒ At least two Fragments: Top Fragment and a Bottom Fragment
- ☒ Jetpack features such as the ViewModel, LiveData, etc
- ☒ Interaction with a Web service: <https://api.watchmode.com/>

API KEY Used:
